

POTTORFF®

Elevated Temperature Lab

Performance

Precision

Reliability

Our lab features:

- equipment that has been designed and qualified to test in accordance with AMCA 500D and is certified by UL's Witness Test Data Program for UL 555S testing.
- three fans capable of generating up to 97,000 cfm.
- a 4375 cu. ft chamber with 29 nozzles, 8 settling screens and a 35 million BTU burner to test a standard 3' x 4' damper up to 500F, 27 in. of static pressure and 5500 fpm.

Our Elevated Temperature Airflow lab allows us to streamline our product development efforts as well as enhance current product offerings. At Pottorff we are dedicated to ensuring that the performance information of our products is both accurate and credible. This state-of-the-art testing lab guarantees precision and allows us to quickly respond to new customer needs.
